

MDC is equipped to build custom vacuum components of virtually any complexity. Vacuum vessels can be built to your exact specifications from a rough hand-sketch, detailed engineering drawings or anything in-between. MDC's engineering department uses the latest Solidworks® software and can accept drawings electronically in either STP, DWG or DXF file formats. MDC can supply a complete engineering documentation package on those projects for which drawings were not provided by the customer.

CUSTOM FABRICATIONS

PRECISE MOTORIZATION

Add motorization, convenience and precise control to any motion component with the NEW SMSCS or SMMCS motor, driver and power supply package.
